# Tetracaine Lollipops

**Common uses:**
This medication is a local anesthetic and is used to numb a sore or irritated mouth or throat. It may also be used to numb the gag reflex in certain types of dental procedures and to relieve pain associated with oral lesions3

**How to use the medication:**
Suck on the lollipop for 10-15 seconds and then stop. The medication should begin to work in approximately 2 minutes. This lollipop should be dissolved in the mouth and the saliva that is produced should be swallowed. Swallowing the saliva will numb the throat, keeping the saliva in your mouth for as long as possible will numb your mouth and tongue. The lollipop may also be moved around in the mouth for maximum results. This may be repeated until results are obtained every 2 to 3 hours as needed.

**Precautions:**
- Do not exceed the recommended dosage set. An adult MUST monitor the use in children.
- KEEP THIS MEDICATION OUT OF THE REACH OF CHILDREN UNDER THE AGE OF 7.
- Do not break the lollipop and swallow the pieces of medication.
- You will not need the entire lollipop at one time.

**Possible side effects:**
This medication may cause tingling, stinging, and tenderness. If they persist, contact your doctor. If you have any of the following, let your provider know immediately and discontinue the lollipop: dizziness, lightheadedness, skin rash, tremors, and/or muscle aches.

**Storage:**
Store the lollipop at room temperature in a dark area to protect from excess light. Keep out of reach of children and pets. These lollipops have extra-long sticks in an attempt to distinguish them from the more common candy lollipop.

**Contact us:**
Feel free to call our office with any questions Monday through Friday from 8:00am to 4:30pm at 405-608-8833.
